Project

Spam & Non spam email classifier

In this project the emails data is checked and classified into 2 categories a spam email or a non spam email. Example for spam email is like you won 1 lakh reward signup below these type of emails are marked as spam in my model and it gives above 95 % accuracy.

Flight reservation system

A basic flight reservation GUI using python Tkinter and sql connecting together and worked for login flight search booking of the flight and checking all booked flights

Notepad

Notepad is used every day for storing basic text and save the data in txt file so i decided to create my very own notepad using Python tkinter package in this a used and save the txt file and create new file i tried to put basic functionality of notepad in this.

Achievements

Achievement in certification of data science and Machine learning using Python. Also recently received certification from linkedin learning for python programming.
